

The Ockam *Matryx* brings a new level of control to the Ockam System. *Matryx* is in fact the bridge between a straight display and full computer display/control previously available only by connecting a PC running OckamSoft or the Ockam ESP.

Whether installed on the mast of a 30-foot sportboat or on the bridge of a megayacht, *Matryx* offers more information in more ways than any other display in the marketplace.

Ockam's venerable 005 display has proved the long-term benefit of through-glass sensing; mechanical buttons found on lesser products inevitably fail and allow water penetration. New OpTac switches eliminate the problems of mechanical failure and water penetration while offering the ease of pushbutton control with positive tactile feedback.

Once again, Ockam leads in technology designed for the long haul in the harshest environments

Matryx Features

- 1 to 4 items per page, including description; up to 18 pages.
- Wind and Current stripcharts.
- Switchable 'portrait' or 'landscape' mounting.
- Switchable black-on-white or white-on-black presentation.
- Simple pushbutton operation.
- Instrument cal, options and averaging controls.
- OpTac switches sense through the glass, eliminating sources of leakage.
- Control via front buttons, remote buttons or remote commands from software or the Lynx™ keyfob controller – or all four.
- Full graphic high visibility backlit LCD.
- 8" x 6"
